

Environmental Safety Statement

Here at Clad Metal Specialties, we comply with all relevant rules and regulations when it comes to protecting ourselves as well as our environment.

We provide training to our personnel to ensure safe handling habits in the workplace.

We practice safe handling and disposal of all hazardous materials by relying on professionals to remove all recycling and materials that could impact our local community.

We recycle our scrap by category not only to get the best possible yield from the melt but assist the assayer in regulating the waste on their end.

We participate in regular town inspections as required to ensure we are compliant with all government regulations.
